

Florian between two tricky tasks

It's only 30 meters from the rehearsal room back to the workplace

Florian Lieb,
consultant for industrial software development
processes

During my IT studies I was a student trainee at PASS, and in 2004 I was hired as a full-time member of the Research & Development staff. In the meantime, I am a consultant responsible for the process engine component and support our customers in remaining market leaders or reaching the top of their markets.

It is an exciting challenge in evaluating innovations to work on new topics all the time and find simple ways of representing complex situations. I enjoy the organizational freedom I'm given here.

After work I strike a different chord: as a guitarist in the band „IF“. We play in clubs and at a wide variety of parties and events, sometimes at PASS as well. It's a kick to work with my colleagues during the day and then play for them in the evening.

If you too...

- are completing a university education in the field of IT
- want to achieve your full potential with the market leaders in the banking, insurance, travel, industry, telecommunications and IT sector
- want to combine your interests with your career

... then get in touch with us.

Maybe we'll be part of the same team soon.
